

# The Perfect Model Building Workbench

By Bruce Oberleitner

Years of advanced model building has lead me on a quest to build the perfect workbench. As seen in the photos, perfection has been achieved with the creation of the Mark 5 portable workbench! The bench (i.e. A 5' folding table with a cheap vinyl tablecloth) holds everything a model builder could ever need.

## Highlights of the Mark 5 Design

- Tools are easy to find and use. Locate the screwdriver shown in Figure 1.
- No mistaking your coffee mug for that mug filled with india ink and alcohol.
- Lots of space is available under the bench to store supplies in a similar fashion!
- Multiple version are easy to build! Make three of them for different type of projects!
- If your cat jumps on the workbench and knocks over some glue, who is going to notice?

I hope you will build one today! Give it a try!

Figure 1: Clutter becomes a thing of the past. The Perfect Workbench (seen above) includes lots of space so that you can find everything at a glance.

Figure 2: Look at all the space you have available on the Perfect workbench for building models as shown near the Altoids tin can. Also notice the bottle of expensive canopy glue about to spill on the floor!

## Bill of Materials

### Wal-Mart

- #20010 Colorplace Equip. Gray primer
- 26 Gauge Floral Wire & Floral Wire Cutter

### Apple Barrel Paints

- All of them. Also includes all of Folk Art brand.

### Woodland Scenics

- T-50 Blended Earth spilled over top of workbench
- Scenic Cement spilled on top of prized craftsman tools

### Misc

- 25-30 years of accumulated modeling materials
- Lots of Junk that should have been thrown away
